

ID	Module	Functional / Non-Functional	Description	Priority	Risk	Status
1	IV	Functional	The system Must save data about branches (BranchID, Name, Address)	MH	Medium	InProgress
5	IV	Functional	The system Must support up to 10 branches	MH	Medium	InProgress
2	IV	Functional	The system must allow addition of new company branch	MH	Low	InProgress
3	IV	Functional	The system must allow deletion of exsisting company branch	MH	Low	InProgress
4	IV	Functional	The system must allow update of exsisting company branch	MH	Low	InProgress
6	IV	Functional	The system MUST save data about each product at each branch: productID,product name,branchID, cost price,selling price, producer, shelf quantity,inventory quantity,discount, product category, sub category, subsub category, minimal quantity	MH	Low	InProgress
7	IV	Functional	The system MUST save data about each product item: productID, itemID, product name, BranchID, location, position, expiration date, is defected, is expired)	MH	Low	InProgress
8	IV	Functional	The system Should allow adding new items only for products already exisiting in the system	MH	Low	InProgress
9	IV	Functional	The system Must allow addition of new product in each store and warehouse	MH	Low	InProgress
10	IV	Functional	The system must allow deleting an existing item	MH	Low	InProgress
11	IV	Functional	The system must allow deleting an existing product (and its existing items)	MH	Low	InProgress
12	IV	Functional	The system must allow deleting an existing branch(and its existing products)	MH	Low	InProgress
13	IV	Functional	The system Must allow update product details in each branch (shelf quantity,inventory quantity, minimal quantity)	MH	Low	InProgress
14	IV	Functional	The system Must allow update product details for the whole company (cost price,selling price, discount)	MH	Low	InProgress
15	IV	Functional	The system Must allow update product item details (is defected, is expired,location, position)	MH	Low	InProgress
16	IV	Functional	The system should support operations on items (adding,updating, deleting) for several items at once	NTH	High	InProgress

ID	Module	Functional / Non-Functional	Description	Priority	Risk	Status
17	IV	Functional	The system Should allow adding items and updating items only to existing branches	MH	Medium	InProgress
18	IV	Functional	The system Must send notification when product reach the minimal quantity in each store or warehouse (branch)	MH	Medium	InProgress
19	IV	Functional	The system Should send notification when product runs out in each store shelf	NTH	Medium	InProgress
20	IV	Functional	The system Must allow generate a product report based on the existing inventory in each branch	MH	Medium	InProgress
21	IV	Functional	The system Must allow generate a product report based on the existing inventory in whole company	MH	Medium	InProgress
22	IV	Functional	The system Must allow generate a report about the defected items in each branch	MH	Medium	InProgress
23	IV	Functional	The system Should allow generate a report about the items which about to expire in the each branch	NTH	Medium	InProgress
24	IV	Functional	The system Should allow generate a sales report about the best sellers products in each branch	NTH	Medium	InProgress
25	IV	Functional	The system Should allow generate a sales report about the best sellers products in the whole company	NTH	Medium	InProgress
26	IV	Non Functional	The system Must be availble in each branch work time	MH	High	InProgress
